

# Web Plan

Our website is constructed using WordPress, a content management system renowned for its utilization of automatically generated code encompassing HTML, CSS, and JavaScript for the frontend. The backend of the website is developed employing Object-Oriented Programming (OOP) in PHP, complemented by a MySQL database. Additionally, dynamic features are implemented through the integration of AJAX and JSON technologies. This amalgamation of technologies contributes to the dynamic nature of the website, enabling seamless interactivity and efficient data management.

## 1- Front-end

- HTML
- CSS
- JavaScript
- Json

## 2- Back-end

- PHP (OOP)
- MySql
- Ajax
