# Academic Program and Course Description Guide

## Introduction:

The educational program is a well–planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

In this regard, we can only emphasize the importance of writing an academic programs and course description to ensure the proper functioning of the educational process.

## **Concepts and terminology:**

<u>Academic Program Description</u>: The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

<u>Course Description</u>: Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

**<u>Program Vision</u>**: An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

**<u>Program Mission</u>**: Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

**<u>Program Objectives</u>**: They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

**Curriculum Structure:** All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

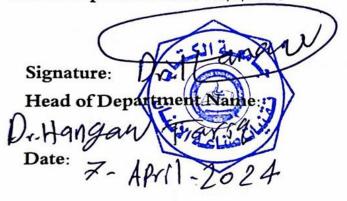

**Learning Outcomes:** A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

<u>Teaching and learning strategies</u>: They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extra-curricular activities to achieve the learning outcomes of the program.

## **Academic Program Description Form**

University Name: Al-Kitab University Faculty/Institute: College of Medical Technology Scientific Department: Department of Dental Techniques Academic or Professional Program Name: Bachelor of Dental Industry Final Certificate Name: Bachelor of Dental Industry Academic System: The first and second stages are semester, the third and fourth stages are annual Description Preparation Date: 2/2/2024

File Completion Date: 30/3/2024

Signature: Scientific Associate Name Dr. Saifaddi Sabir Ati Date: 7- Apr- 2024

The file is checked by:

Department of Quality Assurance and University Performance Director of the Quality Assurance and University Performance Department Date: 8/4/2024 Signature:

Approved of the Dean

Dr. Saiforddin S. A

## 1. Program Vision

The Department of Dental Industry Techniques has a unique scientific position in the scientific and academic community locally and regionally and plays an effective and influential applied role in the technical and medical field, as it works in dental industry laboratories to create alternative teeth for patients (dental prostheses) according to descriptions and standards at the request of the dentist, and these compensations include: bridges, implants, and dentures. The dental technician produces these prostheses by mechanical manual labor using special machines and tools.

## 2. Program Mission

1-Performs the laboratory steps related to the partial and complete coronal and metal moving sets.

2- Completes the laboratory steps related to the manufacture of metal, ceramic and plastic bridges.

3– Completes the laboratory steps related to the manufacture of maxillofacial prostheses.

4- Performs laboratory steps for mobile orthodontic devices only.

5- Operates and maintains laboratory equipment for dental industry laboratories

## 3. Program Objectives

The department aimed to graduate technical staff working in dental industry laboratories and be able to complete all steps related to the manufacture of orthodontic alternatives for fixed and mobile teeth and maxillofacial compensation The main objective of the Department of Dental Industry is to train the student and teach him and prepare him theoretically and practically to graduate a dental industry technician who has the distinguished and advanced technical skill as well as knowledge of laboratory materials and devices and how to deal with them and inform them of the types of laboratories and methods of furnishing and management, as well as trying The department and constantly introduce all new and useful with a focus on the scientific aspects and delete all the old does not fit the march of scientific and technical development, especially after the development in technical education and the establishment of the Central Technical University and finally the department aims to graduate technical staff working in the dental industry laboratories and be able to complete all steps in the manufacture of orthodontic alternatives fixed and mobile and facial and maxillofacial compensation

#### 4. Program Accreditation

The approved program is prepared by the sectoral committee in the Ministry of Higher Education and Scientific Research

### 5. Other external influences

Field visits and training in health centers and laboratories

## 9. Teaching and Learning Strategies

1 –Giving scientific and theoretical lectures using information technology in the college (computer and Internet)

2– Providing students with the basics and additional topics related to the previous education outcomes of skills, to solve practical problems

3- Applying theoretically studied topics at the practical level in the field of dental industry.

4– Working in educational laboratories to graduate and prepare skilled and efficient technical medical cadres with high levels of professionalism The summer training enhances the student's skill and refines it to accomplish all steps related to his field of work efficiently

#### 10. Evaluation methods

- 1 Daily tests.
- 2- Quarterly tests.
- 3- Final exams.
- 4. Scientific reports.
- 5- Commitment to permanence.

11. Faculty									
Faculty Members									
Academic Rank	Specializ	ation	Special Requirements (if applicable)	'	Number of the teaching staff

Assistant lecturer	2	5			7				

#### **Professional Development**

#### Mentoring new faculty members

Directing new teaching staff members, you need to:

1– Orientation and training program: There must be an integrated program to guide and train them on the policies and procedures of the educational institution, effective teaching methods, the use of technology in education, and dealing with students and parents.

2– Educational materials: The necessary educational materials must be provided to help them prepare and deliver lessons effectively.

3- Technical support: There must be technical support available to them in case they encounter technical problems while using technology in education.

4. Reviews and evaluations: Periodic reviews and evaluations of their performance should be provided to identify strengths and weaknesses and provide the necessary guidance and support.

5- Administrative support: They need administrative support to help manage day-to-day business and administrative procedures. 6- Professional development opportunities: Professional development opportunities and continuous training should be provided to faculty members

#### Professional development of faculty members

For the professional development of faculty members, the following elements must be provided:

1– Training programs and workshops: Providing training programs and workshops in various fields such as modern teaching techniques, curriculum development, educational evaluation, and personal and social skills development.

2- Online Learning Opportunities: Provide easy and flexible access to online courses in various fields such as educational technology, language skills development, and classroom management.

3– Participation in conferences and seminars: Encouraging faculty members to participate in local and international conferences and seminars to exchange experiences and knowledge and follow up on the latest innovations in the field of education.

4– Performance evaluation and feedback: Provide effective mechanisms to evaluate the performance of faculty members and provide them with feedback to identify strengths and weaknesses and identify areas in which they need development.

5– Motivation and Encouragement Programs: Establishing incentive programs that encourage faculty members to continue learning and achieve professional development.

6- Individual mentoring: Provide individual orientation sessions for faculty members to discuss their career goals and identify the necessary steps to achieve them.

7- Provide leadership opportunities: Provide opportunities to participate in administrative and leadership activities within the educational institution, which helps them develop leadership and organizational skills.

8. Constructive communication with the Continuing Education Division

#### 12. Acceptance Criterion

1 -Central acceptance of morning studies

2- According to the controls specified by the Ministry of Higher Education through central admission

3- Scientific fees

## 13. The most important sources of information about the program

1-Basic Guide to Dental Materials" by Carmen Scheller-Sheridan: This book provides a comprehensive overview of the materials used in the dental industry and how to use them.

2- "Contemporary Fixed Prosthodontics" by Stephen F. Rosenstiel, Martin F. Land, and Junhei Fujimoto: This book covers multiple aspects of fixed dental manufacturing techniques

3- "Dental Laboratory Technology: Fixed and Special Prosthodontics" by WilliamJ. O'Brien: This book introduces advanced techniques for the design and manufacture of fixed teeth and special prostheses

4–Phillips' Science of Dental Materials" by Kenneth J. Anusavice: This book is considered a comprehensive reference in the field of dental materials and their clinical applications.

5- "Dental Laboratory Procedures: Complete Dentures" by Charles F. O'Brien: This book covers complete dental manufacturing processes and forming and finishing techniques.

## 14. Program Development Plan

Stage I: Assessment of the current situation

1. Conduct a comprehensive evaluation of the current academic program of the Department of Dental Technologies.

2. Identify the strengths, weaknesses, opportunities and challenges of the current program.

3. Conduct a survey of the opinions of students, graduates of the program and faculty members to determine the areas in which the program needs to develop.

Stage II: Setting goals and priorities

1. Set specific and measurable goals for the development of the academic program.

2. Identify priorities and key areas to focus on to improve the program

Stage III: Planning and Implementation

1. Develop updated educational curricula that include the latest developments and technologies in the field of dental industry technologies.

2. Create new educational courses covering modern and advanced topics in the dental industry.

3. Develop practical and laboratory training programs that allow students to apply theoretical concepts in a practical environment.

4. Modernization and development of Laboratories facilities and equipment to be compatible with the latest technologies and standards in the field.

5. Provide external learning opportunities through field visits to dental industry laboratories and facilities.

Fourth Stage: Evaluation and Follow-up

1. Evaluate the developed program through the use of specific evaluation metrics and indicators.

2. Gather feedback from students, faculty, and employers on the effectiveness of the changes made.

3. Make additional adjustments and improvements based on evaluation results and feedback.

9. Teaching	and Learning Strategies
Strategy	• Hands-on learning: This approach involves engaging students in practical work
00	for all steps.
	• Cooperative learning: This approach encourages teamwork and knowledge sharing among students

<ul> <li>Interactive lessons: This strategy involves using interactive methods such as discussions and interactive activities to attract students' attention and encourage them to actively participate in the lesson.</li> <li>Practical projects: This strategy gives students the opportunity to apply what they have learned in real practical projects, which helps them understand concepts more deeply.</li> <li>Participatory assessment: This approach involves involving students in assessment processes and mutually exchanging feedback and comments, which enhances their understanding of the material and helps them improve their performance.</li> </ul>
